*Warranted* specifications describe the performance of a model under stated operating conditions and are covered by the model warranty.

The following characteristic specifications describe values that are relevant to the use of the model under stated operating conditions but are not covered by the model warranty.

- *Typical* specifications describe the performance met by a majority of models.
- *Nominal* specifications describe an attribute that is based on design, conformance testing, or supplemental testing.

Specifications are *Warranted* unless otherwise noted.

# Conditions

---

Minimum or maximum warranted specifications are valid under the following conditions unless otherwise noted.

- 30 minutes warm-up time
- Calibration cycle maintained
- Temperature of 0 °C to 55 °C

Typical specifications are valid under the following condition unless otherwise noted.

- Over ambient temperature ranges of 23 °C ± 5 °C

# Frequency

---

Range <sup>1</sup>	500 kHz to 6.6 GHz
Resolution	
500 kHz to <1.3 GHz	<3 Hz

## Reference Clock

---

### Internal Clock

Initial accuracy	±3 ppm, maximum
Temperature (15 °C to 35 °C)	±1 ppm, maximum
Aging	±5 ppm per year, maximum

### Internal Reference Output (REF OUT and REF OUT2 connector)

Frequency	10 MHz
Amplitude	1 V <sub>pk-pk</sub> into 50 Ω
Coupling	AC
Output impedance	50 Ω

---

<sup>2</sup> The frequency settling time specification includes only frequency settling and excludes any residual amplitude settling that may occur as the result of a large frequency change.

<sup>3</sup> Frequency steps that span the full range of a voltage-controlled oscillator (VCO) require more settling time than steps that remain close together within one VCO or steps that switch between VCOs. The maximum specification covers this worst-case frequency settling time.
