

# Vibration Calibrator for Vibration Level Meter Inspection and Calibration

# **Vibration Calibrator VP-33A**

- Mechanical excitation method (cam type) designed for low distortion.
- Drive motor operation remains stable even in case of load and power supply voltage fluctuations. Consequently there is almost no change in the calibration level / calibration frequency due to weight differences of accelerometers.
- Supplied accelerometer holder enables horizontal calibration.

## Usage example of supplied accelerometer holder

#### Specifications

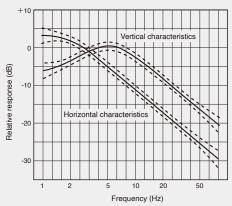

Oscillator frequency	6.3 Hz ± 2 %		
Acceleration	97 dB ± 0.5 dB (0 dB = 10 <sup>-5</sup> m/s <sup>2</sup> (rms))		
	1 m/s <sup>2</sup> ± 0.06 m/s <sup>2</sup> (peak)		
Acceleration waveform	Max. 5 % (Frequency range: 1 Hz to 100 Hz)		
distortion			
Excitation table	130 mm dia.		
	Accelerometer fastening screw diameter: M6 x 10 mm		
Maximum supported weight	2.6 kg		
Ambient conditions for operation	+15 to +35 °C, max. 90 % RH		
Power requirements	100 V AC (50 Hz/60 Hz switchable) max. 1 A		
Dimensions and weight	196 (H) x 304 (W) x 189 (D) mm, approx. 21 kg		
Supplied accessories	AC power cord x 1		
	Accelerometer holder B (VP-54A) x 1 (for PV-83 series		
	horizontal calibration)		
Options	Insulating attachment VP-53C (for calibration of		
	accelerometers other than those of vibration meters)		

#### Instrument calibration and tolerance

	Frequency	Vibration level meter indicated value	Tolerance
Vertical vibration characteristics	6.3 Hz	97.2 dB	±1 dB
Horizontal vibration characteristics	6.3 Hz	90.2 dB	±1 dB
Vibration acceleration level (flat characteristics)	6.3 Hz	97.0 dB	±1 dB

#### Vibration Level Meters JIS C 1510:1995

### Response and tolerance for vertical characteristics / horizontal characteristics

#### Reference response and tolerance for flat characteristics

#### Precautions

- Consider the weight of the product (21 kg) and proceed with caution when moving it.
- Depending on the installation location, the condition of the floor may cause errors in the excitation level.
   If possible, the floor at the installation location should be level and made of concrete.
- If the excitation table is subject to shocks or objects exceeding the rated weight are placed on it, waveform distortion may occur.
- In order to maintain continued accuracy, regular inspection and calibration are recommended.
